
Recommender Systems – An Introduction

Dietmar Jannach, Markus Zanker, Alexander Felfernig, Gerhard Friedrich
Cambridge University Press

Which digital camera should I buy? What is the best holiday for me and my family? Which is the best investment for supporting the education of my children? Which movie should I rent? Which web sites will I find interesting? Which book should I buy for my next vacation? Which degree and university are the best for my future?

Agenda

- **Introduction**
 - Problem domain
 - Purpose and success criteria
 - Paradigms of recommender systems
 - Collaborative Filtering
 - Content-based Filtering
 - Knowledge-Based Recommendations
 - Hybridization Strategies

Introduction

Problem domain

- **Recommendation systems (RS) help to match users with items**
 - Ease information overload
 - Sales assistance (guidance, advisory, persuasion,...)

RS are software agents that elicit the interests and preferences of individual consumers [...] and make recommendations accordingly.

They have the potential to support and improve the quality of the decisions consumers make while searching for and selecting products online.

» (Xiao & Benbasat 2007¹)

- **Different system designs / paradigms**
 - Based on availability of exploitable data
 - Implicit and explicit user feedback
 - Domain characteristics

(1) Xiao and Benbasat, *E-commerce product recommendation agents: Use, characteristics, and impact*, MIS Quarterly **31** (2007), no. 1, 137–209

Purpose and success criteria (1)

- **Different perspectives/aspects**
 - Depends on domain and purpose
 - No holistic evaluation scenario exists

- **Retrieval perspective**
 - Reduce search costs
 - Provide "correct" proposals
 - Users know in advance what they want

- **Recommendation perspective**
 - Serendipity – identify items from the Long Tail
 - Users did not know about existence

When does a RS do its job well?

- "Recommend widely unknown items that users might actually like!"
- 20% of items accumulate 74% of all positive ratings
- Items rated > 3 in MovieLens 100K dataset

Purpose and success criteria (2)

- **Prediction perspective**
 - Predict to what degree users like an item
 - Most popular evaluation scenario in research

- **Interaction perspective**
 - Give users a "good feeling"
 - Educate users about the product domain
 - Convince/persuade users - explain

- **Finally, conversion perspective**
 - Commercial situations
 - Increase "hit", "clickthrough", "lookers to bookers" rates
 - Optimize sales margins and profit

Recommender systems

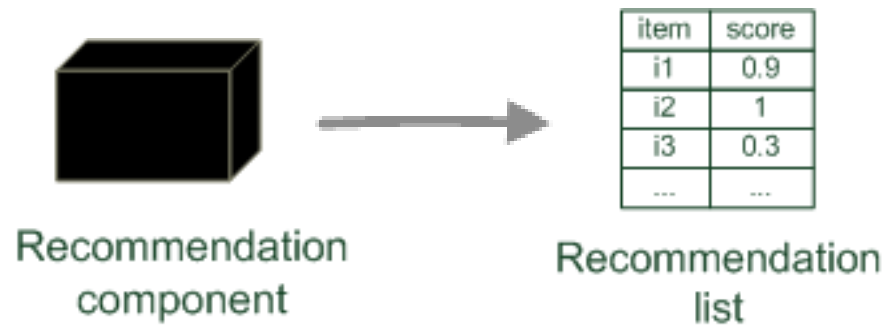

- **RS seen as a function**
- **Given:**
 - User model (e.g. ratings, preferences, demographics, situational context)
 - Items (with or without description of item characteristics)
- **Find:**
 - Relevance score. Used for ranking.

-
- **Relation to Information Retrieval:**
 - IR is finding material [...] of an unstructured nature [...] that satisfies an information need from within large collections [...].
 - » (Manning et al. 2008¹)

Paradigms of recommender systems

Outlook

- **Part I (Basic Concepts)**
 - Basic paradigms of collaborative,
 - content-based, and
 - knowledge-based recommendation,
 - as well as hybridization methods.
 - Explaining the reasons for recommending an item
 - Experimental evaluation

 - **Part II (Recent Research Topics)**
 - How to cope with efforts to attack and manipulate a recommender system from outside,
 - supporting consumer decision making and
 - potential persuasion strategies,
 - recommendation systems in the context of the social and semantic webs, and
 - the application of recommender systems to ubiquitous domains
-
